Dear tdhaemol,

I hope you're doing well.

We have already completed the second milestone. Please confirm the delivery of the second milestone so that we can start working on the third milestone. For the third milestone, we will begin working on API integration and 3D animation.

You can preview the live version of the website here: <https://landing-page-lota-eight-94.vercel.app>.

Please take a look at the preview, and if any corrections or adjustments are needed, feel free to let us know. We'll be happy to make any necessary improvements.

Looking forward to your feedback!

we have not delivered the full milestones at this point....

1. We have corrections that we wont to correct

2. We want to have the design for the page scan start before we move forward

3. We don t have product listing whats a point of milestone 1 and 2

Please make sure to make these things and then we can move forward to milestone 3.

Theo correction and the list of products as i said i will send you tomorrow so it would be good if we can make the second point of design the scan starting site today!

Dear tdhaemol,

For the 3D scan to start, we will need the backend API. If you want to display a user-guided 3D model, we will also need the 3D file, which we can implement on the frontend for display.

Regarding the product listing, our frontend design is already complete. Now, if you provide the backend API for the product list, we will integrate it accordingly. However, if you prefer a static product list, please provide the product details, and we will add them manually.

Looking forward to your feedback!

Best regards,
- Me

As i already said we would really like to move on to milestone 3 but first we will be fully satisfied with the design.

And to design we also count the design of how we start the 3d Scan not the function.

We also share at monday the document of product listings and the document with the last correction of design...When this all done we move to milestone 3

this is a 3d file but you can use also a draft one or i dont know please start with the design of this page and then we can correct it together only important that we move foward

T **tdhaemol** Mar 22, 2025, 4:25 AM

thamk u guys u are amazing and we appreciate all!!

G **Me** Mar 22, 2025, 6:42 AM

Thanks for sharing the 3D file. Let me check first with my developer team. Then if I need anything else from your side I'll let you know.
